PROFILE

Full Stack Developer with 2.8 years of experience building scalable REST APIs and real-time systems using Node.js and TypeScript.

Specialized in backend architecture, WebSocket-based real-time communication, and third-party integrations like Stripe and Veriff. Experienced in database design (MongoDB, MySQL), API optimization, and deploying production-ready backend services on AWS with CI/CD pipelines.

Open to remote backend opportunities.

EDUCATION

United Institute of Technology <i>Bachelor Of Technology (Computer Science)</i>	2020 – 2024 Prayagraj
B.L.W Inter College <i>12</i>	2017 – 2018 Varanasi
B.L.W Inter College <i>10</i>	2016 – 2017 Varanasi

SKILLS

- Node.js & Express.js
- TypeScript
- MongoDB
- MySQL
- Redis / Caching
- REST APIs, WebSockets (Socket.IO), Authentication (JWT)
- Cloud & DevOps: AWS, Jenkins, CI/CD, Deployment
- Integrations: Stripe, Veriff, Third-party APIs
- React
- Redux
- Next.js

PROFESSIONAL EXPERIENCE

Backend Developer <i>SolarioTech</i>	02/2025 – Present Mohali, India
• Designed and developed scalable REST APIs using Node.js and TypeScript • Designed and managed MongoDB databases, including schema design and optimized queries. • Implemented WebSocket-based real-time communication for live data updates. • Handled real-time data updates with low latency (<1 second) • Integrated third-party APIs for multiple services	

- Integrated **Veriff API** for user KYC / identity verification
- Built **real-time alert and notification systems** for application events.
- Worked on **AI-based features/projects**, integrating intelligent processing into backend services.
- Developed and maintained **REST APIs** for web and mobile applications.

Full Stack Developer

Kumarsoft

08/2023 – 12/2024

Noida, Uttar Pradesh

- Developed **full stack web applications using React.js and Node.js**.
- Built and maintained **REST APIs using Node.js and Express**.
- Worked with **MySQL database** for data storage and queries.
- Implemented **CRUD operations and authentication systems**.
- Integrated frontend with backend APIs.

PROJECTS

QuestBoard App

Service Marketplace Platform

Worked on the backend of a service marketplace platform where customers can create jobs or tasks and runners can accept and complete those jobs through the application. The backend was developed using **Node.js with TypeScript**, with **MongoDB** used for database management and data modeling for users, jobs, and task workflows. Developed multiple **REST APIs** to support job creation, job acceptance, task tracking, and user management. Integrated **Stripe Connect** for runner onboarding and payment processing within the platform. Implemented **Veriff KYC verification** to verify runner identities before allowing them to accept jobs. Built **real-time alerts and job status updates using WebSockets** to improve the user experience. The application was deployed on **AWS**, and **Jenkins CI/CD pipelines** were used for automated build and deployment of backend services.

Tech Stack: Node.js, TypeScript, MongoDB, Veriff, Stripe, AWS, Jenkins .

Silent Knight App

Emergency Alert System

Worked on the backend of an **emergency alert mobile application** designed to trigger alerts in critical situations. The system integrates a **third-party HAAS Alert API** to send real-time emergency notifications. Implemented backend services using **Node.js and TypeScript**, with **WebSocket-based real-time communication** to instantly deliver alerts to connected users and systems. Developed features to track **live location and device battery status** to ensure accurate emergency monitoring. The alert system was designed to trigger notifications only when the user is **moving**, reducing false alerts. Integrated **in-app purchases for Android and iOS** to enable premium features within the mobile application. Built APIs for alert management, location tracking, and emergency workflows, ensuring reliable and real-time response during emergencies.

Tech Stack: Node.js, TypeScript, MongoDB, InAppPurchase, WebSocket, HAAS-Alert(Third-party API), AWS, Jenkins .

Education / Coaching Institute Web Platforms

Full Stack Project

Developed complete web platforms for multiple coaching institutes including **cavalierindiapune.in** , **vidyarjantutorial.in** , and **vidyarjanscienceacademy.in** . The applications were built using **React.js for the frontend and Node.js for the backend**, with **MySQL** used for database management. Implemented a **dynamic admin panel** that allows administrators to manage courses, upload images, and update website content without developer support. Built and integrated **REST APIs** to handle course data, banners, and content updates. Designed the system so that all course information, images, and website sections can be updated dynamically through the admin dashboard. Ensured responsive UI, smooth frontend-backend integration, and scalable architecture.

Tech Stack: React.js, Node.js, Express.js, MySQL, REST APIs, Admin Panel, Dynamic Content Management.

CERTIFICATES

AI / Machine Learning Certification

- Scaler (covered ML fundamentals, data processing, and AI concepts)

Full Stack Web Development

- CodeHelp (React, Node.js, backend development concepts)

Web Development Training

- Internshala (HTML, CSS, JavaScript, backend basics)
